

New Design WIX 49184

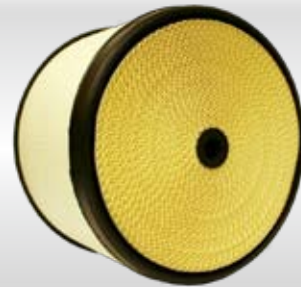

WIX Filters is pleased to announce product improvements to its 49184 air filter which is recommended for use on late model General Motors light and medium duty trucks equipped with the 6.6 liter Duramax diesel engine.

These improvements are the result of research and development aimed squarely at meeting and exceeding the demands of today's high-tech diesel engines.

Here are some of the notable enhancements:

- Improved service life thanks to a 20% gain in dirt holding capacity.
- The use of polymerized phenolic resin impregnated media to improve the filters performance and ability to handle moisture.
- A completely redesigned outer body for improved ease of installation and removal.

These changes have been made as part of an ongoing product strategy that focuses on innovation and continuing product improvement.

The WIX 49184.

New polymerized phenolic impregnated media.

Improved ease of installation.
